
Parallel port speed

Posted by Alan - 2009/07/13 13:55

Hi,

What is maximum speed when I turn ON and OFF a pin of parallel port. Say I want to create a clock signal. In my case I can get it is around 90 khz without any delay between ON -OFF the pin. Is it so? I thought I can get around 500khz. Any idea ??

Hi!

I'm working with printer port in VB6 but I've obtained cca. 10 cycles.please send me a program to obtain about100 cycles. My mail is coliscip@yahoo.com aand my YahooID is: coliscip .Thank you in advance!
Ciprian
